Cost-Effective Software Development: Near-Shore Agile Teams, Locally Managed

Low-Cost Agile Developers

With the number of emerging software companies increasing exponentially, the demand for high-quality development resources greatly outnumbers the supply, leading to increased domestic rates that just aren't affordable.

Our Agile developers are cost-effective and what we call "near-shore", working out of South America and operating during your business hours. No more early-morning or late-night conference calls to time-zones on the other side of the world...the people working on YOUR software are accessible when YOU need them.

Experts in Continuous-Delivery Development

We provide experienced Agile experts who know how to work within a continuous-delivery model. You'll be able to deliver secure, fully-tested features to your customers in a fraction of the time it used to take. Software is your business, and your best features need to be in the hands of your customers NOW.

Our developers are excellent English-speakers, each with years of experience in engineering to go along with major university degrees in Computer Science.

Local, On-Site Project Management

One of the drawbacks of hiring an offshore development team is the lack of physical presence. What we provide is unique- a local management team of senior consultants that work with you as liaison for our near-shore engineers. Our consultants directly manage our near-shore developers, allowing you to focus on your business.

All of our consultants have decades of experience in product, project, and architectural management, and are all practiced in DevOps techniques. They are available to be on-site at your workplace, ensuring that your projects are in safe hands and are top-priority.
